

Blåtind Professional Industrial Detergent FF641, FF727, FF825

Blåtind Professional Industrial Detergent

Product characteristics and areas of application

Blåtind Professional Industrial Detergent is a powerful alkaline degreasing agent developed for cleaning surfaces able to withstand strong alkaline cleaners. Removes most types of dirt, such as grease, oil, soot and more. The product does not contain hydrocarbons and is readily biodegradable.

The formulation contains highly efficient surfactants ensuring a perfect clean result. Product should not be used on soft alloys. Contains lye. Especially developed for cleaning surfaces such as floors and walls in production facilities, workshops, and warehouses, as well as cleaning construction machinery, tools, and other production equipment. Should not be used on varnished surfaces or glass, as it can cause permanent stains.

User manual and dosage

Can be applied using high pressure or low-pressure washing systems. Can also be applied manually by using a sponge, mop or similar.

Apply product from the bottom upwards to avoid stripes and stains. Allow the product to work for 4-5 minutes before rinsing with clean water. Should not be used on varnished surfaces or glass, as it can cause permanent stains. The concentrated product will react with aluminum, zinc, tin and their alloys.

Dosage:

When using high pressure wash:	1:1 – 1:5
Manual washing:	1 dl to 10 liters of water

When cleaning very dirty areas, the detergent can be applied undiluted. Use of hot water will improve the cleaning effect. Recommended water temperature 30-70°C.

Features, Benefits and Applications

- Alkaline detergent
- Water-based
- Effectively removes dirt such as grease, oil, soot and similar
- Efficient cleaning of workshops and production facilities

Read the Health, Safety and Environment Data Sheet before using the product.
